

MDS CSC - CARD SERVICE CENTER

- Allows selective acceptance of \$1, \$5, \$10, and \$20 bills. Each bill type may be accepted for card purchases only, for add value operations only, for both operations, or not at all.
- 400-bill downstacker maximizes card vending capability between cash collections
- High security, 14-gauge steel cabinet with 12-gauge steel door and T-Bar lock
- Unit can be wall mounted or completely recessed into the wall for increased security
- Resettable/non-resettable totals and counters for accounting accuracy and data security
- Optional communications allow all configuration and reporting tasks to be handled from a portable laptop or centralized PC

DESIGNED WITH SECURITY IN MIND

The CSC/BASE provides card purchase capabilities only and features programmable card pricing and bill acceptance criteria. All cards must be pre-encoded — or initialized — before being offered for sale.

The CSC/AV is for card “add value” applications only. Available with a magnetic stripe card, smart card reader, this unit enables patrons to add value to their cards by inserting cash — \$1, \$5, \$10, or \$20 bills — until the desired value is reached. The Card Service Center features a heavy-duty steel cabinet, with a high-security I-Bar lock, that protects stored cards and cash. Hidden hinges on the steel door ensure even greater security, and the entire unit can be recessed into the wall to further protect it against vandalism.

CSC data — including total dollars inserted, cards dispensed, dollars deposited for add value operations, and more is secured through the use of re-settable and non-resettable counters. These totals are easily accessed via management and internal keys — or with the unit’s optional communications capability via a PC. from unauthorized usage. Settable group codes ensure that cards can only be used at their intended location, plus provide a means for setting up multiple card pricing levels.

AUTOMATES CARD SERVICES

The MDS Card Service Center (CSC) is part of the SingleCard product line. It is a fullfeatured, stored value card station. Patrons can use it to purchase new cards, add value to existing smart or magnetic stripe cards. This all-in-one approach stimulates card sales and usage increasing revenues, while at the same time eliminating manual card sales and their associated cash handling problems.

CARD PURCHASE

The standard CSC/AV is a Cash-To-Card Add-Value Station. Adding the optional Card Dispenser Kit provides the CSC/AV with card purchase capabilities.
