

### **MDS/MB20 - Copiers, Printers, POS, & More**

- Monitor & control access to multiple chargeable services
- Keypad, swipe & proximity card operation
- Full online transaction recording & reporting
- Centralized control, audit & management
- Versatile, flexible and modular

### **FLEXIBLE**

The MB20 terminal is part of a family of products that all work together in an integrated Expense Management System. Extra models may be added at any time without losing your initial investment. Other MDS Solution devices include pay stations, vending, Point of Sale (POS) and laundry control terminals.

### **DYNAMIC**

The MB20 terminal communicates with the MDS System Software using TCP/IP across standard Ethernet networks, delivering real-time transactions, device usage history, and access to remote diagnostic and support capability. The terminal supports fixed or dynamic IP address allocation and all data is encrypted for security.

### **VERSATILE**

The ultimate versatility of the MB20 terminal is why it should be the gateway to your integrated expense management solution. It is able to control the access and charging of a wide range of equipment and services. Charges may be based on a number of parameters, including:

- Click/Page Count
- Items or Units of Time
- Monetary Amounts

It can deliver advanced features such as: differentiating between student, staff and casual users, customizable data fields and on-screen prompts. Devices may be configured to charge 16 different prices (e.g. color, paper size, duplex). This versatility ensures customizable enforcement of use and price policies for photocopiers, printers, facsimile, point-of-sale & Internet time.

### **KEY BENEFITS**

#### **For Your Users**

- Easy to use with cashless convenience and on screen credit display
- Saves space in their wallet by using their ID, security, bank or other proprietary card
- PIN protection & online credit balance offers security since value is not on the card, if lost or stolen
- Offline storage and validation capability ensures service usage during network failures
- Transaction history via web based reports

#### **For You the Service Provider**

- Monitor & maximize revenue from multiple chargeable services
- Secure access, user authentication & credit validation
- Audit accountability & customized reporting
- Supports identification by magnetic swipe, Mifare, proximity, proprietary cards or keypad
- Real-time transactions, remote diagnostic & support capability
- Flexible architecture & modular products
- Efficient control drives decision making & cost savings
